Fund Summary

Yorkville High Income MLP ETF (the “Fund”)

Investment Objective

The Fund seeks to provide investment results that, before fees and expenses, correspond generally to the price and yield performance of the Solactive High Income MLP Index (the “Index”).

Fees and Expenses

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (“Shares”). This table and the Example below do not include the brokerage commissions that investors may pay on their purchases and sales of Fund Shares.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fee	0.82%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses ¹	0.00%
Total Annual Fund Operating Expenses	0.82%

¹ The Fund is classified for federal income tax purposes as a taxable regular corporation or Subchapter “C” corporation. As a “C” corporation, the Fund will accrue deferred income tax liability for its future tax liability associated with the capital appreciation of its investments, with certain distributions received by the Fund on equity securities of Master Limited Partnerships (“MLPs”) considered to be return of capital, and with any net operating gains. The Fund’s accrued deferred tax liability will be reflected each day in the Fund’s net asset value per share. The Fund’s current and deferred tax liability, if any, will depend upon income, gains, losses, and deductions the Fund is allocated from its MLP investments and on the Fund’s realized and unrealized gains and losses and therefore may vary greatly from year to year depending on the nature of the Fund’s investments, the performance of those investments and general market conditions. Actual income tax expense, if any, will be incurred over many years, depending on if and when investment gains and losses are realized, the then current basis of the Fund’s assets and other factors. For the fiscal period March 12, 2012 (the Fund’s commencement of operations) to November 30, 2012, the Fund did not incur a net deferred income tax expense. However, there can be no assurance that the Fund will not incur such an expense in the current fiscal year.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same.

Although your actual costs may be higher or lower, based on these assumptions your cost would be:

1 Year	3 Years	5 Years	10 Years
\$84	\$262	\$455	\$1,014

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes at the Fund level and, when Fund Shares are held in a taxable account, at the shareholder level. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. For the fiscal period from March 12, 2012, the Fund’s commencement of operations, through November 30, 2012, the Fund’s portfolio turnover rate was 2% of the average value of its portfolio.

Principal Investment Strategies

The Fund will normally invest at least 80% of its total assets in securities of the Index. The Index is a rules-based index designed to provide investors a means of tracking the performance of selected Master Limited Partnerships (“MLPs”) which are publicly traded on a U.S. securities exchange. Under normal circumstances, the Fund invests at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in securities of MLPs. This investment policy may be changed without shareholder approval, upon 60 days’ prior notice to shareholders.

The Index consists of MLPs operating with one of the following as a substantial business segment: exploration and production of oil and/or natural gas; sale, distribution and retail and wholesale marketing of propane, natural gas liquids, gasoline and other fuels; marine transportation of one or more of the following: crude oil, dry bulk, refined products, liquefied natural gas (“LNG”), and other commodities; direct mining, production and marketing of natural resources, including timber, fertilizers, coal and other minerals; energy services to the oil and gas industry; oil refining; leasing of mineral reserves; and operating as the general partner of any business listed above. As of February 28, 2013 the U.S. dollar-denominated market capitalizations of the Index components ranged from approximately \$390 million to approximately \$8.9 billion.

The Fund employs a “passive management” investment strategy in seeking to achieve its investment objective. The Fund generally will use a replication methodology, meaning it will invest in all of the securities comprising the Index in proportion to the weightings in the Index. However, the Fund may utilize a sampling methodology under various circumstances where it may not be possible or practicable to purchase all of the securities in the Index.

MLPs are publicly traded partnerships engaged in the transportation, storage, processing, refining, marketing, exploration, production, and mining of minerals and natural resources. By confining their operations to these specific activities, their interests, or units, are able to trade on public securities exchanges exactly like the shares of a corporation, without entity level taxation.

An MLP consists of a general partner and limited partners (or in the case of MLPs organized as limited liability companies, a managing member and members). The general partner or managing member typically controls the operations and management of the MLP and has an ownership stake in the MLP. The limited partners or members, through their ownership of limited partner or member interests, provide capital to the entity, are intended to have no role in the operation and management of the entity and receive cash distributions. The Fund will be a limited partner (or a member) in the MLPs in which it invests. MLPs are generally treated as partnerships for United States federal income tax purposes. Thus, the MLPs themselves generally do not pay United States federal income taxes, but investors (like the Fund) that hold interests in MLPs are generally subject to tax on their allocable shares of the MLPs' income and gains. Currently, most MLPs operate in the energy and/or natural resources sectors.

To qualify as an MLP and to not be taxed as a corporation, a partnership must receive at least 90% of its income from qualifying sources as set forth in Section 7704(d) of the Internal Revenue Code of 1986, as amended (the "Code"). These qualifying sources include natural resource-based activities such as the processing, transportation and storage of mineral or natural resources and other commodities.

Of the 40 partnerships eligible for inclusion in the Index, approximately 65% trade on the New York Stock Exchange ("NYSE") and the rest trade on the NASDAQ National Market ("NASDAQ"). Partnerships eligible for inclusion in the Index are subject to further market capitalization and liquidity screens before they may be included in the Index.

The Fund will concentrate its investments (*i.e.* hold 25% or more of its total assets) in a particular industry or group of industries to approximately the same extent that the Index concentrates in an industry or group of industries. As of February 28, 2013, the Index was concentrated in the energy sector.

The Index is calculated and administered by Structured Solutions AG, which is not affiliated with the Fund, its investment adviser, Exchange Traded Concepts, LLC (the "Adviser"), Yorkville ETF Advisors, LLC (the "Investment Sub-Adviser") or Index Management Solutions, LLC (the "Trading Sub-Adviser"). Structured Solutions AG determines the components and the relative weightings of the securities in the Index subject to the Index rules and publishes information regarding the Index. The Index is rebalanced annually, but may be adjusted more frequently under extraordinary circumstances, consistent with the Index's methodology.

Principal Risks

As with all funds, a shareholder is subject to the risk that his or her investment could lose money. The principal risks affecting shareholders' investments in the Fund are set forth below.

MLP Risk. Investments in common units of MLPs involve risks that differ from investments in common stock including risks inherent in the structure of MLPs, including (i) tax risks (described further below), (ii) risk related to limited control of management or the general partner or managing member (iii) limited rights to vote on matters affecting the MLP, except

with respect to extraordinary transactions, and (iv) conflicts of interest between the general partner or managing member and its affiliates, on the one hand, and the limited partners or members, on the other hand, including those arising from incentive distribution payments or corporate opportunities, and cash flow risks, as described in more detail in this Prospectus.

MLP common units and other equity securities can be affected by macro-economic and other factors affecting the stock market in general, expectations of interest rates, investor sentiment towards MLPs or the energy sector, changes in a particular issuer's financial condition, or unfavorable or unanticipated poor performance of a particular issuer (in the case of MLPs, generally measured in terms of distributable cash flow). Prices of common units of individual MLPs and other equity securities also can be affected by fundamentals unique to the partnership or company, including cash flow growth, cash generating power and distribution coverage.

MLP Tax Risk. Much of the benefit the Fund derives from its investment in equity securities of MLPs is a result of MLPs generally being treated as partnerships for U.S. federal income tax purposes. Partnerships do not pay U.S. federal income tax at the partnership level. Rather, each partner is allocated a share of the partnership's income, gains, losses, deductions and expenses. A change in current tax law, or a change in the business of a given MLP, could result in an MLP being treated as a corporation for U.S. federal income tax purposes. As a result, the amount of cash available for distribution by the MLP could be reduced and the after-tax return to the Fund with respect to its investment in such MLPs would generally be materially reduced. Thus, if any of the MLPs owned by the Fund were treated as corporations for U.S. federal income tax purposes, it could result in a reduction in the value of your investment in the Fund and lower distributions.

An MLP's distributions to the Fund generally will not be taxable unless the cash amount (or, in certain cases, the value of marketable securities) distributed exceeds the Fund's basis in its interest in the MLP. Distributions received by the Fund from an MLP will reduce the Fund's adjusted basis in its interest in the MLP, but not below zero. A reduced basis will generally result in an increase in the amount of gain (or decrease in the amount of loss) that will be recognized by the Fund for tax purposes on the sale of its interest in the MLP. Cash distributions from an MLP to the Fund (and, in certain cases, the value of marketable securities distributed by an MLP to the Fund) in excess of the Fund's basis in the MLP will generally be taxable to the Fund as capital gain. The Fund will not benefit from favorable federal income tax rates on long-term capital gains because it will be treated as a corporation for federal income tax purposes.

Depreciation or other cost recovery deductions passed through to the Fund from investments in MLPs in a given year will generally reduce the Fund's taxable income (and earnings and profits), but those deductions may be recaptured in the Fund's income (and earnings and profits) in subsequent years when the MLPs dispose of their assets or when the Fund disposes of its interests in the MLPs. When deductions are recaptured, the Fund may owe a tax (the payment of which will reduce the Fund's net assets) and distributions to the Fund's shareholders may be taxable, even though the shareholders at the time of the recapture might not have held Shares in the Fund at the time the deductions were taken by the Fund, and even though the Fund does not have corresponding economic gain on its investment at the time of the recapture.

The tax treatment of all items allocated to the Fund each year by the MLPs will not be known until the Fund receives a schedule K-1 for that year with respect to each of its MLP investments. The Fund's tax liability will not be known until the Fund completes its annual tax return. The Fund's tax estimates could vary substantially from the actual liability and therefore the determination of the Fund's actual tax liability may have a material adverse effect on the value of an investment in the Fund. The payment of corporate income taxes imposed on the Fund will decrease cash available for distribution to shareholders.

Energy Sector Risks. Many MLPs operate within the energy sector. Therefore, a substantial portion of the MLPs in which the Fund invests are engaged in the energy sector of the economy. As a result, a downturn in the energy sector of the economy, adverse political, legislative or regulatory developments or other events could have a larger impact on the Fund than on an investment company that does not invest a substantial portion of its assets in the energy sector. At times, the performance of securities of companies in the energy sector may lag the performance of other sectors or the broader market as a whole. In addition, there are several specific risks associated with investments in the energy sector, including the following:

- the energy sector is highly regulated. MLPs operating in the energy sector are subject to significant regulation of nearly every aspect of their operations by federal, state and local governmental agencies;
- MLPs operating in the energy sector may be affected by fluctuations in the prices of energy commodities, including, for example, natural gas, natural gas liquids, crude oil and coal, in the short- and long-term;
- MLPs engaged in the exploration, development, management or production of energy commodities face the risk that commodity reserves are depleted over time, with the potential associated effect of causing the market value of the MLP to decline over time;
- MLPs operating in the energy sector could be adversely affected by reductions in the supply of or demand for energy commodities;
- extreme weather or other natural disasters could impact the value of MLPs operating in the energy sector;
- the abilities of MLPs operating in the energy sector to grow and to increase cash distributions to unitholders can be highly dependent on their ability to make acquisitions that result in an increase in cash flows;
- rising interest rates which could adversely impact the financial performance and/or the present value of cash flow of MLPs operating in the energy sector; and
- MLPs operating in the energy sector are subject to many dangers inherent in the production, exploration, management, transportation, processing and distribution of natural gas, natural gas liquids, crude oil, refined petroleum and petroleum products and other hydrocarbons. In addition, threats of attack by terrorists on energy assets could impact the market for MLPs operating in the energy sector.

Industry Specific Risks. MLPs operating in the energy sector are also subject to risks that are specific to the industry they serve.

- Midstream. Midstream MLPs that provide crude oil, refined product and natural gas services are subject to supply and demand fluctuations in the markets they serve which

may be impacted by a wide range of factors including fluctuating commodity prices, weather, increased conservation or use of alternative fuel sources, increased governmental or environmental regulation, depletion, rising interest rates, declines in domestic or foreign production, accidents or catastrophic events, increasing operating expenses and economic conditions, among others.

- Exploration and production. Exploration and production MLPs produce energy resources, including natural gas and crude oil. Exploration and production MLPs that own oil and gas reserves are particularly vulnerable to declines in the demand for and prices of crude oil and natural gas. Substantial downward adjustments in reserve estimates could have a material adverse effect on the value of such reserves and the financial condition of an MLP. Exploration and production MLPs seek to reduce cash flow volatility associated with commodity prices by executing multi-year hedging strategies that fix the price of gas and oil produced. There can be no assurance that the hedging strategies currently employed by these MLPs are currently effective or will remain effective.
- Marine shipping. Marine shipping MLPs are primarily marine transporters of natural gas, crude oil or refined petroleum products. Marine shipping companies are exposed to many of the same risks as other energy companies. The highly cyclical nature of the marine transportation industry may lead to volatile changes in charter rates and vessel values, which may adversely affect the revenues, profitability and cash flows of MLPs with marine transportation assets.
- Propane. Propane MLPs are distributors of propane to homeowners for space and water heating. MLPs with propane assets are subject to earnings variability based upon weather conditions in the markets they serve, fluctuating commodity prices, customer conservation and increased use of alternative fuels, increased governmental or environmental regulation, and accidents or catastrophic events, among others.
- Natural Resource. MLPs with coal, timber, fertilizer and other mineral assets are subject to supply and demand fluctuations in the markets they serve, which will be impacted by a wide range of domestic and foreign factors including fluctuating commodity prices, the level of their customers' coal stockpiles, weather, increased conservation or use of alternative fuel sources, increased governmental or environmental regulation, depletion, declines in production, mining accidents or catastrophic events, health claims and economic conditions, among others.

Tax Status of the Fund. The Fund is treated as a regular corporation, or "C" corporation, for U.S. federal income tax purposes. This differs from most investment companies, which elect to be treated as "regulated investment companies" under the Code in order to avoid paying entity level income taxes. Under current law, the Fund is not eligible to elect treatment as a regulated investment company due to its investments primarily in MLPs. Accordingly, the Fund is subject to U.S. federal income tax on its taxable income at the graduated rates applicable to corporations (currently at a maximum rate of 35%) as well as state and local income taxes. As discussed below, the Fund expects that a portion of the distributions it receives from MLPs may be treated as a tax-deferred return of capital. The amount of taxes currently paid by the Fund will vary depending on the amount of income, gains, losses, and deductions the Fund is allocated from its MLP investments and on the amount of gains and losses derived from sales of MLP interests. Fund-level taxes will reduce your return from an investment in the Fund.

Deferred Tax Risk. For financial reporting (but not tax reporting) purposes, the Fund will accrue deferred income taxes for any future tax liability associated with (i) all or a portion of certain MLP distributions and any net operating gains as well as (ii) capital appreciation of its investments. The Fund's accrued deferred tax liability will be reflected each day in the Fund's net asset value ("NAV"). Increases in deferred tax liability will decrease NAV. Conversely, decreases in deferred tax liability will increase NAV. The Fund generally computes deferred income taxes based on the federal tax rate applicable to corporations, currently 35%, and an assumed rate attributable to state taxes. A change in the federal tax rate applicable to corporations and, consequently, any change in the deferred tax liability of the Fund, may have a significant impact on the NAV of the Fund. The Fund's current and deferred tax liability, if any, will depend upon the Fund's income, gains, losses, and deductions the Fund is allocated from its MLP investments and on the Fund's realized and unrealized gains and losses and therefore may vary greatly from year to year depending on the nature of the Fund's investments, the performance of these investments and general market conditions. The Fund will rely to a significant extent on information provided by the MLPs, which may not be timely, to estimate deferred tax liability for purposes of financial statement reporting and determining NAV. From time to time, the Investment Sub-Adviser may modify the estimates or assumptions regarding the Fund's deferred tax liability as new information becomes available. The Fund estimates regarding its deferred tax liability are made in good faith; however, the daily estimate of the Fund's deferred tax liability used to calculate the Fund's NAV could vary dramatically from the Fund's actual tax liability. Actual income taxed, if any, will be incurred over many years depending on if, and when, investment gains and losses are realized, the timing of recapture income realized by an MLP or realized by the Fund on a sale of an MLP interest, and other factors. As a result, the determination of the Fund's actual tax liability may have a material impact on the Fund's NAV.

Although the Fund's NAV will take into account deferred tax liabilities, there can be no assurance that the purchase price you pay for Shares will take into account deferred tax liabilities. If you purchase Shares at a substantial premium to NAV, the value of the Shares may be adversely impacted by a recapture event that triggers a deferred tax liability not fully reflected in your purchase price or by the issuance of Creation Units at an NAV less than your purchase price.

In the event the Fund is in a net deferred tax asset position, the Fund will evaluate all available information and consider the criterion established by the Financial Accounting Standards Board Codification Topic 740, Income Taxes (formerly Statement of Financial Accounting Standards No. 109) in order to properly assess whether it is more likely than not that the deferred tax asset will be realized or whether a valuation allowance is required.

Return of Capital Distributions From the Fund Reduce the Tax Basis of Fund Shares. A portion of the Fund's distributions are expected to be treated as a return of capital for tax purposes. Return of capital distributions are not taxable income to you but reduce your tax basis in your Fund Shares. Such a reduction in tax basis will generally result in larger taxable gains and/or lower tax losses on a subsequent sale of Fund Shares. The Fund's return of capital distributions are not derived from the net income or earnings and profits of the Fund. Shareholders should not

assume that all Fund distributions are derived from the net income or earnings and profits of the Fund.

Liquidity Risk. Although MLPs trade on national securities exchanges, certain MLP securities may trade less frequently than those of larger companies due to their smaller capitalizations. At times, due to limited trading volumes of certain MLPs, the prices of such MLPs may display abrupt or erratic movements. Moreover, it may be more difficult for the Fund to buy and sell significant amounts of such securities without an unfavorable impact on prevailing market prices. The Fund's investment in securities that are less actively traded or over time experience decreased trading volume may restrict its ability to take advantage of other market opportunities or to dispose of securities at a fair price at the times when the Investment Sub-Adviser believes it is desirable to do so. This also may affect adversely the Fund's ability to make dividend distributions to you.

Potential Substantial After-Tax Tracking Error From Index Performance. As discussed above, the Fund will be subject to taxation on its taxable income. The Index, however, is calculated without any deductions for taxes. As a result, the Fund's after tax performance could differ significantly from the Index even if the pretax performance of the Fund and the performance of the Index are closely correlated.

Risk of Cash Transactions. Unlike many exchange-traded funds ("ETFs"), the Fund expects to effect redemptions principally for cash, rather than in-kind. Other ETFs generally are able to make in-kind redemptions and avoid realized gains in connection with transactions designed to meet redemption requests. Because the Fund may effect redemptions principally for cash, rather than in-kind distributions, it may be required to sell portfolio securities in order to obtain the cash needed to distribute redemption proceeds. Such cash transactions may have to be carried out over several days if the securities market is relatively illiquid and may involve considerable brokerage fees. These brokerage fees, which will be higher than if the Fund redeemed its Shares in-kind, will be passed on to redeemers of Creation Units in the form of redemption transaction fees. In addition, these factors may result in wider spreads between the bid and the offered prices of the Fund's Shares than for more conventional ETFs. Sales of portfolio securities to generate cash may trigger recapture income, which may be taxable to a Fund and may cause distributions from a Fund to be treated as taxable dividends.

Management Risk: Because the Fund may not fully replicate its Index and may hold fewer than the total number of securities in its Index and may hold securities not included in its Index, the Fund is subject to management risk. This is the risk that the Investment Sub-Adviser's security selection process, which is subject to a number of constraints, may not produce the intended results.

Market Risk: The values of equity securities in the Index could decline generally or could underperform other investments.

Non-Diversification Risk: The Fund is non-diversified, meaning that, as compared to a diversified fund, it can invest a greater percentage of its assets in securities issued by or

representing a small number of issuers. As a result, the performance of these issuers can have a substantial impact on the Fund's performance.

Passive Investment Risk: The Fund is not actively managed and therefore the Fund would not sell shares of an equity security due to current or projected underperformance of a security, industry or sector, unless that security is removed from the Index or the selling of shares of that security is otherwise required upon a rebalancing of the Index as addressed in the Index methodology.

Non-Correlation Risk: The Fund's returns may not match the return of the Index for reasons other than the risk of tracking error due to the effect of taxes. For example, the Fund incurs some other operating expenses which are not applicable to the Index, as well as transaction costs in buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect Index composition changes.

Performance Information

The Fund commenced operations on March 12, 2012 and therefore does not have performance history for a full calendar year. Once the Fund has completed a full calendar year of operations, a bar chart and table will be included that will provide some indication of the risks of investing in the Fund by showing the variability of the Fund's return based on net assets and comparing the variability of the Fund's return to a broad measure of market performance.

Investment Advisers

Exchange Traded Concepts, LLC serves as the investment adviser to the Fund. Yorkville ETF Advisors, LLC, the Investment Sub-Adviser, and Index Management Solutions, LLC, the Trading Sub-Adviser, serve as sub-advisers to the Fund.

Portfolio Manager

Darren R. Schuringa, CFA, is a Portfolio Manager of Yorkville ETF Advisors, LLC and has served as portfolio manager of the Fund since its inception.

For important information about the purchase and sale of Fund shares and tax information, please turn to "Summary Information about Purchasing and Selling Shares and Taxes" on page 19 of the prospectus.

Fund Summary

Yorkville High Income Infrastructure MLP ETF (the “Infrastructure Fund” or “Fund”)

Investment Objective

The Fund seeks to provide investment results that, before fees and expenses, correspond generally to the price and yield performance of the Solactive High Income Infrastructure MLP Index (the “Infrastructure Index” or “Index”).

Fees and Expenses

This table describes the fees and expenses that you may pay if you buy and hold shares of the Infrastructure Fund (“Shares”). This table and the Example below do not include the brokerage commissions that investors may pay on their purchases and sales of Fund Shares.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fee	0.82%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses ¹	0.00%
Total Annual Fund Operating Expenses	0.82%

¹ Other Expenses are based on estimated amounts for the current fiscal year. The Fund is classified for federal income tax purposes as a taxable regular corporation or subchapter “C” corporation. Other Expenses do not reflect deferred income tax liability to be incurred by the Fund. The Fund will accrue deferred income tax liability for its future tax liability associated with the capital appreciation of its investments, with certain distributions received by the Fund on equity securities of Master Limited Partnerships (“MLPs”) considered to be return of capital, and with any net operating gains. The Fund’s accrued deferred tax liability will be reflected each day in the Fund’s net asset value per share. The Fund’s current and deferred tax liability, if any, will depend upon income, gains, losses, and deductions the Fund is allocated from its MLP investments and on the Fund’s realized and unrealized gains and losses and therefore may vary greatly from year to year depending on the nature of the Fund’s investments, the performance of those investments and general market conditions. Actual income tax expense, if any, will be incurred over many years, depending on if and when investment gains and losses are realized, the then current basis of the Fund’s assets and other factors.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same.

Although your actual costs may be higher or lower, based on these assumptions your cost would be:

1 Year	3 Years
\$84	\$262

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes at the Fund level and, when Fund Shares are held in a taxable account, at the shareholder level. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. During the fiscal year ended November 30, 2012, the Fund was not in operation.

Principal Investment Strategies

The Fund will normally invest at least 80% of its total assets in securities of the Index. The Index is a rules-based index designed to provide investors a means of tracking the performance of selected infrastructure Master Limited Partnerships (“MLPs”), with an emphasis on current yield. Index components are publicly traded on a U.S. securities exchange. Under normal circumstances, the Fund invests at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in securities of MLPs. This investment policy may be changed without shareholder approval, upon 60 days’ prior notice to shareholders.

The Index consists of MLPs classified as “Infrastructure” MLPs. Infrastructure MLPs are a subset of the MLP universe that earn a majority of their cash flow from the transportation and storage of energy commodities. Infrastructure MLPs include all MLPs operating with one of the following as a substantial business segment:

- transportation, terminaling and storage of refined petroleum products, including gasoline, diesel, jet fuel, kerosene and heating oil;
- gathering, compressing, dehydrating, treating, processing, and marketing of natural gas, and fractionation of natural gas liquids;
- transportation and/or storage of natural gas and natural gas liquids;
- transportation of crude oil and/or refined petroleum products and other liquids; and
- operating as the general partner of an MLP which primarily engages in any of the businesses listed above.

As of February 28, 2013, the U.S. dollar-denominated market capitalizations of the Index components ranged from approximately \$1.3 billion to approximately \$51.8 billion.

The Fund employs a “passive management” investment strategy in seeking to achieve its investment objective. The Fund generally will use a replication methodology, meaning it will invest in all of the securities comprising the Index in proportion to the weightings in the Index. However, the Fund may utilize a sampling methodology under various circumstances where it may not be possible or practicable to purchase all of the securities in the Index.

MLPs are publicly traded partnerships engaged in the transportation, storage, processing, refining, marketing, exploration, production, and mining of minerals and natural resources. By confining their operations to these specific activities, their interests, or units, are able to trade on public securities exchanges exactly like the shares of a corporation, without entity level taxation.

An MLP consists of a general partner and limited partners (or in the case of MLPs organized as limited liability companies, a managing member and members). The general partner or managing member typically controls the operations and management of the MLP and has an ownership stake in the MLP. The limited partners or members, through their ownership of limited partner or member interests, provide capital to the entity, are intended to have no role in the operation and management of the entity and receive cash distributions. The Fund will be a limited partner (or a member) in the MLPs in which it invests. MLPs are generally treated as partnerships for United States federal income tax purposes. Thus, the MLPs themselves generally do not pay United States federal income taxes, but investors (like the Fund) that hold interests in MLPs are generally subject to tax on their allocable shares of the MLPs' income and gains. Currently, most MLPs operate in the energy and/or natural resources sectors.

To qualify as an MLP and to not be taxed as a corporation, a partnership must receive at least 90% of its income from qualifying sources as set forth in Section 7704(d) of the Internal Revenue Code of 1986, as amended (the "Code"). These qualifying sources include natural resource-based activities such as the processing, transportation and storage of mineral or natural resources and other commodities.

Of the 50 partnerships eligible for inclusion in the Index, approximately 90% trade on the New York Stock Exchange ("NYSE") and the rest trade on the NASDAQ National Market ("NASDAQ"). Partnerships eligible for inclusion in the Index are subject to further market capitalization and liquidity screens before they may be included in the Index.

The Fund will concentrate its investments (*i.e.* hold 25% or more of its total assets) in a particular industry or group of industries to approximately the same extent that the Index concentrates in an industry or group of industries. As of February 28, 2013, the Index was concentrated in the energy infrastructure sector.

The Index is calculated and administered by Structured Solutions AG, which is not affiliated with the Fund, its investment adviser, Exchange Traded Concepts, LLC (the "Adviser"), Yorkville ETF Advisors, LLC (the "Investment Sub-Adviser") or Index Management Solutions, LLC (the "Trading Sub-Adviser"). Structured Solutions AG determines the components and the relative weightings of the securities in the Index subject to the Index rules and publishes information regarding the Index. The Index is rebalanced annually, but may be adjusted more frequently under extraordinary circumstances, consistent with the Index's methodology.

Principal Risks

As with all funds, a shareholder is subject to the risk that his or her investment could lose money. The principal risks affecting shareholders' investments in the Fund are set forth below.

MLP Risk. Investments in common units of MLPs involve risks that differ from investments in common stock including risks inherent in the structure of MLPs, including (i) tax risks (described further below), (ii) risk related to limited control of management or the general partner or managing member (iii) limited rights to vote on matters affecting the MLP, except with respect to extraordinary transactions, and (iv) conflicts of interest between the general partner or managing member and its affiliates, on the one hand, and the limited partners or members, on the other hand, including those arising from incentive distribution payments or corporate opportunities, and cash flow risks, as described in more detail in this Prospectus.

MLP common units and other equity securities can be affected by macro-economic and other factors affecting the stock market in general, expectations of interest rates, investor sentiment towards MLPs or the energy sector, changes in a particular issuer's financial condition, or unfavorable or unanticipated poor performance of a particular issuer (in the case of MLPs, generally measured in terms of distributable cash flow). Prices of common units of individual MLPs and other equity securities also can be affected by fundamentals unique to the partnership or company, including cash flow growth, cash generating power and distribution coverage.

MLP Tax Risk. Much of the benefit the Fund derives from its investment in equity securities of MLPs is a result of MLPs generally being treated as partnerships for U.S. federal income tax purposes. Partnerships do not pay U.S. federal income tax at the partnership level. Rather, each partner is allocated a share of the partnership's income, gains, losses, deductions and expenses. A change in current tax law, or a change in the business of a given MLP, could result in an MLP being treated as a corporation for U.S. federal income tax purposes. As a result, the amount of cash available for distribution by the MLP could be reduced and the after-tax return to the Fund with respect to its investment in such MLPs would generally be materially reduced. Thus, if any of the MLPs owned by the Fund were treated as corporations for U.S. federal income tax purposes, it could result in a reduction in the value of your investment in the Fund and lower distributions.

An MLP's distributions to the Fund generally will not be taxable unless the cash amount (or, in certain cases, the value of marketable securities) distributed exceeds the Fund's basis in its interest in the MLP. Distributions received by the Fund from an MLP will reduce the Fund's adjusted basis in its interest in the MLP, but not below zero. A reduced basis will generally result in an increase in the amount of gain (or decrease in the amount of loss) that will be recognized by the Fund for tax purposes on the sale of its interest in the MLP. Cash distributions from an MLP to the Fund (and, in certain cases, the value of marketable securities distributed by an MLP to the Fund) in excess of the Fund's basis in the MLP will generally be taxable to the Fund as capital gain. The Fund will not benefit from favorable federal income tax rates on long-term capital gains because it will be treated as a corporation for federal income tax purposes.

Depreciation or other cost recovery deductions passed through to the Fund from investments in MLPs in a given year will generally reduce the Fund's taxable income (and earnings and profits), but those deductions may be recaptured in the Fund's income (and earnings and profits) in subsequent years when the MLPs dispose of their assets or when the Fund disposes of its interests in the MLPs. When deductions are recaptured, the Fund may owe a tax (the payment of which will reduce the Fund's net assets) and distributions to the Fund's shareholders may be

taxable, even though the shareholders at the time of the recapture might not have held Shares in the Fund at the time the deductions were taken by the Fund, and even though the Fund does not have corresponding economic gain on its investment at the time of the recapture.

The tax treatment of all items allocated to the Fund each year by the MLPs will not be known until the Fund receives a schedule K-1 for that year with respect to each of its MLP investments. The Fund's tax liability will not be known until the Fund completes its annual tax return. The Fund's tax estimates could vary substantially from the actual liability and therefore the determination of the Fund's actual tax liability may have a material adverse effect on the value of an investment in the Fund. The payment of corporate income taxes imposed on the Fund will decrease cash available for distribution to shareholders.

Energy Sector Risks. Many MLPs operate within the energy sector. Therefore, a substantial portion of the MLPs in which the Fund invests are engaged in the energy sector of the economy. As a result, a downturn in the energy sector of the economy, adverse political, legislative or regulatory developments or other events could have a larger impact on the Fund than on an investment company that does not invest a substantial portion of its assets in the energy sector. At times, the performance of securities of companies in the energy sector may lag the performance of other sectors or the broader market as a whole. In addition, there are several specific risks associated with investments in the energy sector, including the following:

- the energy sector is highly regulated. MLPs operating in the energy sector are subject to significant regulation of nearly every aspect of their operations by federal, state and local governmental agencies;
- MLPs operating in the energy sector may be affected by fluctuations in the prices of energy commodities, including, for example, natural gas, natural gas liquids and crude oil, in the short- and long-term;
- MLPs engaged in the transportation or storage of energy commodities face the risk that commodity reserves are depleted over time, with the potential associated effect of causing the market value of the MLP to decline over time;
- MLPs operating in the energy sector could be adversely affected by reductions in the supply of or demand for energy commodities;
- extreme weather or other natural disasters could impact the value of MLPs operating in the energy sector;
- the abilities of MLPs operating in the energy sector to grow and to increase cash distributions to unitholders can be highly dependent on their ability to make acquisitions that result in an increase in cash flows;
- rising interest rates which could adversely impact the financial performance and/or the present value of cash flow of MLPs operating in the energy sector; and
- MLPs operating in the energy sector are subject to many dangers inherent in the management, transportation, storage, gathering, compressing, treating, processing, marketing and fractionation of natural gas, natural gas liquids, crude oil, refined petroleum and petroleum products and other hydrocarbons. In addition, threats of attack by terrorists on energy assets could impact the market for MLPs operating in the energy sector.

Industry Specific Risks. Energy infrastructure MLPs are also subject to risks that are specific to the industry they serve.

- Midstream. Midstream MLPs that provide crude oil, refined product and natural gas services are subject to supply and demand fluctuations in the markets they serve which may be impacted by a wide range of factors including fluctuating commodity prices, weather, increased conservation or use of alternative fuel sources, increased governmental or environmental regulation, depletion, rising interest rates, declines in domestic or foreign production, accidents or catastrophic events, increasing operating expenses and economic conditions, among others.
- Pipeline. Pipeline MLPs are not subject to direct commodity price exposure because they do not own the underlying energy commodity. However, the MLP sector can be hurt by market perception that MLPs' performance and distributions are directly tied to commodity prices. Also, a significant decrease in the production of natural gas, oil, or other energy commodities, due to a decline in production from existing facilities, import supply disruption, or otherwise, would reduce revenue and operating income of MLPs and, therefore, the ability of MLPs to make distributions to partners.

A sustained decline in demand for crude oil, natural gas and refined petroleum products could adversely affect MLP revenues and cash flows. Factors that could lead to a decrease in market demand include a recession or other adverse economic conditions, an increase in the market price of the underlying commodity, higher taxes or other regulatory actions that increase costs, or a shift in consumer demand for such products. Demand may also be adversely impacted by consumer sentiment with respect to global warming and/ or by any state or federal legislation intended to promote the use of alternative energy sources, such as bio-fuels.

MLPs employ a variety of means of increasing cash flow, including increasing utilization of existing facilities, expanding operations through new construction, expanding operations through acquisitions, or securing additional long-term contracts. Thus, some MLPs may be subject to construction risk, acquisition risk or other risk factors arising from their specific business strategies. A significant slowdown in large energy companies' disposition of energy infrastructure assets and other merger and acquisition activity in the energy MLP industry could reduce the growth rate of cash flows received by the Fund from MLPs that grow through acquisitions.

Tax Status of the Fund. The Fund is treated as a regular corporation, or "C" corporation, for U.S. federal income tax purposes. This differs from most investment companies, which elect to be treated as "regulated investment companies" under the Code in order to avoid paying entity level income taxes. Under current law, the Fund is not eligible to elect treatment as a regulated investment company due to its investments primarily in MLPs. Accordingly, the Fund is subject to U.S. federal income tax on its taxable income at the graduated rates applicable to corporations (currently at a maximum rate of 35%) as well as state and local income taxes. As discussed below, the Fund expects that a portion of the distributions it receives from MLPs may be treated as a tax deferred return of capital. The amount of taxes currently paid by the Fund will vary

depending on the amount of income, gains, losses, and deductions the Fund is allocated from its MLP investments and on the amount of gains and losses derived from sales of MLP interests. Fund-level taxes will reduce your return from an investment in the Fund.

Deferred Tax Risk. For financial reporting (but not tax reporting) purposes, the Fund will accrue deferred income taxes for any future tax liability associated with (i) all or a portion of certain MLP distributions and any net operating gains as well as (ii) capital appreciation of its investments. The Fund's accrued deferred tax liability will be reflected each day in the Fund's net asset value ("NAV"). Increases in deferred tax liability will decrease NAV. Conversely, decreases in deferred tax liability will increase NAV. The Fund generally computes deferred income taxes based on the federal tax rate applicable to corporations, currently 35%, and an assumed rate attributable to state taxes. A change in the federal tax rate applicable to corporations and, consequently, any change in the deferred tax liability of the Fund, may have a significant impact on the NAV of the Fund. The Fund's current and deferred tax liability, if any, will depend upon the Fund's income, gains, losses, and deductions the Fund is allocated from its MLP investments and on the Fund's realized and unrealized gains and losses and therefore may vary greatly from year to year depending on the nature of the Fund's investments, the performance of these investments and general market conditions. The Fund will rely to a significant extent on information provided by the MLPs, which may not be timely, to estimate deferred tax liability for purposes of financial statement reporting and determining NAV. From time to time, the Investment Sub-Adviser may modify the estimates or assumptions regarding the Fund's deferred tax liability as new information becomes available. The Fund estimates regarding its deferred tax liability are made in good faith; however, the daily estimate of the Fund's deferred tax liability used to calculate the Fund's NAV could vary dramatically from the Fund's actual tax liability. Actual income taxed, if any, will be incurred over many years depending on if, and when, investment gains and losses are realized, the timing of recapture income realized by an MLP or realized by the Fund on a sale of an MLP interest, and other factors. As a result, the determination of the Fund's actual tax liability may have a material impact on the Fund's NAV.

Although the Fund's NAV will take into account deferred tax liabilities, there can be no assurance that the purchase price you pay for Shares will take into account deferred tax liabilities. If you purchase Shares at a substantial premium to NAV, the value of the Shares may be adversely impacted by a recapture event that triggers a deferred tax liability not fully reflected in your purchase price or by the issuance of Creation Units at an NAV less than your purchase price.

In the event the Fund is in a net deferred tax asset position, the Fund will evaluate all available information and consider the criterion established by the Financial Accounting Standards Board Codification Topic 740, Income Taxes (formerly Statement of Financial Accounting Standards No. 109) in order to properly assess whether it is more likely than not that the deferred tax asset will be realized or whether a valuation allowance is required.

Return of Capital Distributions From the Fund Reduce the Tax Basis of Fund Shares. A portion of the Fund's distributions are expected to be treated as a return of capital for tax purposes. Return of capital distributions are not taxable income to you but reduce your tax basis in your

Fund Shares. Such a reduction in tax basis will generally result in larger taxable gains and/or lower tax losses on a subsequent sale of Fund Shares. The Fund's return of capital distributions are not derived from the net income or earnings and profits of the Fund. Shareholders should not assume that all Fund distributions are derived from the net income or earnings and profits of the Fund.

Liquidity Risk. Although MLPs trade on national securities exchanges, certain MLP securities may trade less frequently than those of larger companies due to their smaller capitalizations. At times, due to limited trading volumes of certain MLPs, the prices of such MLPs may display abrupt or erratic movements. Moreover, it may be more difficult for the Fund to buy and sell significant amounts of such securities without an unfavorable impact on prevailing market prices. The Fund's investment in securities that are less actively traded or over time experience decreased trading volume may restrict its ability to take advantage of other market opportunities or to dispose of securities at a fair price at the times when the Investment Sub-Adviser believes it is desirable to do so. This also may affect adversely the Fund's ability to make dividend distributions to you.

Potential Substantial After-Tax Tracking Error From Index Performance. As discussed above, the Fund will be subject to taxation on its taxable income. The Index, however, is calculated without any deductions for taxes. As a result, the Fund's after tax performance could differ significantly from the Index even if the pretax performance of the Fund and the performance of the Index are closely correlated.

Risk of Cash Transactions. Unlike many exchange-traded funds ("ETFs"), the Fund expects to effect redemptions principally for cash, rather than in-kind. Other ETFs generally are able to make in-kind redemptions and avoid realized gains in connection with transactions designed to meet redemption requests. Because the Fund may effect redemptions principally for cash, rather than in-kind distributions, it may be required to sell portfolio securities in order to obtain the cash needed to distribute redemption proceeds. Such cash transactions may have to be carried out over several days if the securities market is relatively illiquid and may involve considerable brokerage fees. These brokerage fees, which will be higher than if the Fund redeemed its Shares in-kind, will be passed on to redeemers of Creation Units in the form of redemption transaction fees. In addition, these factors may result in wider spreads between the bid and the offered prices of the Fund's Shares than for more conventional ETFs. Sales of portfolio securities to generate cash may trigger recapture income, which may be taxable to the Fund and may cause distributions from the Fund to be treated as taxable dividends.

Management Risk: Because the Fund may not fully replicate its Index and may hold fewer than the total number of securities in its Index and may hold securities not included in its Index, the Fund is subject to management risk. This is the risk that the Investment Sub-Adviser's security selection process, which is subject to a number of constraints, may not produce the intended results.

Market Risk: The values of equity securities in the Index could decline generally or could underperform other investments.

Non-Diversification Risk: The Fund is non-diversified, meaning that, as compared to a diversified fund, it can invest a greater percentage of its assets in securities issued by or representing a small number of issuers. As a result, the performance of these issuers can have a substantial impact on the Fund's performance.

Passive Investment Risk: The Fund is not actively managed and therefore the Fund would not sell shares of an equity security due to current or projected underperformance of a security, industry or sector, unless that security is removed from the Index or the selling of shares of that security is otherwise required upon a rebalancing of the Index as addressed in the Index methodology.

Non-Correlation Risk: The Fund's returns may not match the return of the Index for reasons other than the risk of tracking error due to the effect of taxes. For example, the Fund incurs some other operating expenses which are not applicable to the Index, as well as transaction costs in buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect Index composition changes.

Performance Information

The Fund commenced operations on February 12, 2013 and therefore does not have performance history for a full calendar year. Once the Fund has completed a full calendar year of operations, a bar chart and table will be included that will provide some indication of the risks of investing in the Fund by showing the variability of the Fund's return based on net assets and comparing the variability of the Fund's return to a broad measure of market performance.

Investment Advisers

Exchange Traded Concepts, LLC serves as the investment adviser to the Fund. Yorkville ETF Advisors, LLC, the Investment Sub-Adviser, and Index Management Solutions, LLC, the Trading Sub-Adviser, serve as sub-advisers to the Fund.

Portfolio Manager

Darren R. Schuringa, CFA, is a Portfolio Manager of Yorkville ETF Advisors, LLC and has served as portfolio manager of the Fund since its inception.

For important information about the purchase and sale of Fund shares and tax information, please turn to "Summary Information about Purchasing and Selling Shares and Taxes" on page 19 of the prospectus.

Summary Information about Purchasing and Selling Shares and Taxes

Purchase and Sale of Fund Shares

The Funds will issue (or redeem) shares to certain institutional investors (typically market makers or other broker-dealers) only in large blocks of at least 50,000 shares known as “Creation Units.” Creation Unit transactions are typically conducted in exchange for the deposit or delivery of in-kind securities and/or cash constituting a substantial replication, or a representation, of the securities included in each Fund’s benchmark Index. Redemptions of Creation Units are effected principally for cash. Individual shares may only be purchased and sold on a national securities exchange through a broker-dealer. You can purchase and sell individual Shares of the Funds throughout the trading day like any publicly traded security. Each Fund’s Shares are listed on the NYSE Arca, Inc. (“NYSE Arca”). The price of each Fund’s Shares is based on market price, and because exchange-traded fund shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount). **Except when aggregated in Creation Units, the Funds’ shares are not redeemable securities.**

Tax Information

Each Fund’s taxable distributions will generally be treated as ordinary income or qualified dividend income to the extent of each Fund’s current and accumulated earnings and profits. Distributions exceeding such amount will be treated first as a return of capital to the extent of, and in reduction of, a shareholder’s tax basis in his or her Shares and, after the shareholder’s tax basis is reduced to zero, as gain on the sale or exchange of Shares. A reduction in a shareholder’s tax basis will generally result in larger taxable gains and/or lower tax losses on a subsequent sale of Fund Shares. A portion of each Fund’s distributions is expected to be treated as a return of capital for tax purposes. A Fund’s return of capital distributions are not derived from the net income or earnings and profits of the Fund. Shareholders should not assume that all Fund distributions are derived from the net income or earnings and profits of each Fund.

Index/Trademark License/Disclaimers

The Indexes are calculated and administered by Structured Solutions AG (“Structured Solutions”). Structured Solutions is not affiliated with the Trust, the Adviser, the Investment Sub-Adviser, the Trading Sub-Adviser, the Funds’ administrator, custodian, transfer agent or distributor, or any of their respective affiliates. The Investment Sub-Adviser has entered into a license agreement with Structured Solutions pursuant to which the Investment Sub-Adviser pays a fee to use the Indexes. The Investment Sub-Adviser is sub-licensing rights to the Indexes to the Funds at no charge.

Shares of the Trust are not sponsored, promoted, sold or supported in any other manner by Structured Solutions nor does Structured Solutions offer any express or implicit guarantee or assurance either with regard to the results of using an Index and/or Index trade mark or an Index price at any time or in any other respect. The Indexes are calculated and published by Structured Solutions. Structured Solutions uses its best efforts to ensure that each Index is calculated correctly. Irrespective of its obligations towards the Trust, Structured Solutions has no obligation to point out errors in the Indexes to third parties including but not limited to investors and/or financial intermediaries of the financial instrument. Neither publication of the Indexes by Structured Solutions nor the licensing of the Indexes or Index trade marks for the purpose of use in connection with Shares of the Trust constitutes a recommendation by Structured Solutions to invest capital in Shares of the Trust nor does it in any way represent an assurance or opinion of Structured Solutions with regard to any investment in Shares of the Trust.

Additional Information about Principal Investment Strategies

Additional Information About MLPs

MLPs are publicly traded partnerships engaged in the transportation, storage, processing, refining, marketing, exploration, production, and mining of minerals and natural resources. By confining their operations to these specific activities, their interests, or units, are able to trade on public securities exchanges exactly like the shares of a corporation, without entity level taxation. Partnerships eligible for inclusion in an Index are subject to further liquidity screens before they may be included in an Index.

MLPs’ disclosures are regulated by the United States Securities and Exchange Commission (“SEC”) and MLPs must file Form 10-Ks, Form 10-Qs, and notices of material changes like any publicly traded corporation. MLPs also must comply with certain requirements applicable to public companies under the Sarbanes-Oxley Act of 2002.

To qualify as an MLP and to not be taxed as a corporation, a partnership must receive at least 90% of its income from qualifying sources as set forth in Section 7704(d) of the Code. These qualifying sources include natural resource-based activities such as the exploration, development, mining, production, processing, refining, transportation, storage and marketing of mineral or natural resources. An MLP consists of a general partner and limited partners (or in the case of MLPs organized as limited liability companies, a managing member and members). The general partner or managing member typically controls the operations and management of the MLP and has an ownership stake in the MLP. The limited partners or members, through their

ownership of limited partner or member interests, provide capital to the entity, are intended to have no role in the operation and management of the entity and receive cash distributions. The MLPs themselves generally do not pay United States federal income taxes, but investors (like a Fund) that hold interests in MLPs are generally subject to tax on their allocable shares of the income and gains of the MLPs. Thus, unlike investors in corporate securities, direct MLP investors are generally not subject to double taxation (i.e., corporate level tax and tax on corporate dividends). Currently, most MLPs operate in the energy and/or natural resources sectors.

General partner or managing member interests receive cash distributions, typically in an amount of up to 2% of available cash, which is contractually defined in the partnership or limited liability company agreement. In addition, holders of general partner or managing member interests typically receive incentive distribution rights (“IDRs”), which provide them with an increasing share of the entity’s aggregate cash distributions upon the payment of per common unit distributions that exceed specified threshold levels above the minimum quarterly distribution. Due to the IDRs, general partners of MLPs have higher distribution growth prospects than their underlying MLPs, but quarterly incentive distribution payments would also decline at a greater rate than the decline rate in quarterly distributions to common and subordinated unit holders in the event of a reduction in the MLP’s quarterly distribution. In addition, some MLPs permit the holder of IDRs to reset, under specified circumstances, the incentive distribution levels and receive compensation in exchange for the distribution rights given up in the reset.

Additional Risk Information

The following section provides additional information regarding certain of the principal risks identified under “Principal Risks” in the “Fund Summary” section along with additional risk information.

Principal Risks

MLP Risk. An investment in MLP units involves risks that differ from a similar investment in equity securities, such as common stock, of a corporation. Holders of MLP units have the rights typically afforded to limited partners in a limited partnership. Holders of MLP units are subject to certain risks inherent in the structure of MLPs, including (i) tax risks (described further below), (ii) the limited ability to elect or remove management or the general partner or managing member (iii) limited voting rights, except with respect to extraordinary transactions, and (iv) conflicts of interest between the general partner or managing member and its affiliates, on the one hand, and the limited partners or members, on the other hand, including those arising from incentive distribution payments or corporate opportunities. General partners typically have limited fiduciary duties to an MLP, which could allow a general partner to favor its own interests over the MLP’s interests. In addition, general partners of MLPs often have limited call rights that may require unitholders to sell their common units at an undesirable time or price. MLPs may issue additional common units without unitholder approval, which would dilute the interests of existing unitholders, including a Fund’s ownership interest.

MLP common units and other equity securities can be affected by macro-economic and other factors affecting the stock market in general, expectations of interest rates, investor sentiment towards MLPs or the energy sector, changes in a particular issuer's financial condition, or unfavorable or unanticipated poor performance of a particular issuer (in the case of MLPs, generally measured in terms of distributable cash flow). Prices of common units of individual MLPs and other equity securities also can be affected by fundamentals unique to the partnership or company, including cash flow growth, cash generating power and distribution coverage.

The Funds derive a significant portion of its cash flow from investments in equity securities of MLPs. Therefore, the amount of cash that a Fund will have available to pay or distribute will depend on the ability of the MLPs that a Fund owns to make distributions to their partners and the tax character of those distributions. Neither the Funds nor the Adviser has control over the actions of underlying MLPs. The amount of cash that each individual MLP can distribute to its partners will depend on the amount of cash it generates from operations, which will vary from quarter to quarter depending on factors affecting the energy infrastructure market generally and on factors affecting the particular business lines of the MLP. Available cash will also depend on the MLPs' level of operating costs (including incentive distributions to the general partner), level of capital expenditures, debt service requirements, acquisition costs (if any), fluctuations in working capital needs and other factors. The Funds expect to generate significant investment income, and a Fund's investments may not distribute the expected or anticipated levels of cash, resulting in the risk that a Fund may not have the ability to make cash distributions as investors expect from MLP-focused investments.

MLP Tax Risk. The benefit you are expected to derive from the Funds' investment in MLPs depends largely on the MLPs being treated as partnerships for federal income tax purposes. As a partnership, an MLP has no federal income tax liability at the entity level. Rather, each partner of the MLP, in computing its U.S. federal income tax liability, must include its allocable share of the MLP's income, gains, losses, deductions and tax credits. If, as a result of a change in current law or a change in an MLP's underlying business mix, an MLP were treated as a corporation for federal income tax purposes, the MLP would be obligated to pay federal income tax on its income at the corporate tax rate (currently at a maximum rate of 35%). If an MLP were classified as a corporation for federal income tax purposes, the amount of cash available for distribution could be reduced and part or all of the distributions a Fund receives might be taxed entirely as dividend income. Therefore, treatment of one or more MLPs as a corporation for federal income tax purposes could affect a Fund's ability to meet its investment objective and could reduce the amount of cash available to pay or distribute to you.

The tax treatment of publicly traded partnerships could be subject to potential legislative, judicial or administrative changes and differing interpretations, possibly on a retroactive basis. For example, Congress has from time to time evaluated proposals that could materially impact publicly traded partnerships. Any modification to the federal income tax laws and interpretations thereof may or may not be applied retroactively. Any such changes could negatively impact the value of an investment in MLPs and therefore the value of your investment in a Fund. In addition, there have been proposals to reduce or eliminate tax incentives widely used by oil, gas and coal companies, and the imposition of new fees on certain energy producers. The elimination

of such tax incentives and imposition of such fees could adversely affect MLPs and other natural resources sector companies in which a Fund invests and/or the natural resources sector generally.

Each Fund will be a limited partner in the MLPs in which it invests. As a result, it will be allocated a pro rata share of income, gains, losses, deductions and expenses from those MLPs. Historically, a significant portion of income from such MLPs has been offset by tax deductions. A Fund will incur a current tax liability on that portion of an MLP's income and gains that is not offset by tax deductions and losses. The percentage of an MLP's income and gains which is offset by tax deductions and losses will fluctuate over time for various reasons. A significant slowdown in acquisition activity by MLPs in the Indexes could result in a reduction of accelerated depreciation generated by new acquisitions, which may result in increased current income tax liability to a Fund.

An MLP's distributions to a Fund generally will not be taxable unless the cash amount (or, in certain cases, the value of marketable securities) distributed exceeds the Fund's basis in its interest in the MLP. Distributions received by a Fund from an MLP will reduce the Fund's adjusted basis in its interest in the MLP, but not below zero. A reduced basis will generally result in an increase in the amount of gain (or decrease in the amount of loss) that will be recognized by the Fund for tax purposes on the sale of its interest in the MLP. Cash distributions from an MLP to a Fund (and, in certain cases, the value of marketable securities distributed by an MLP to a Fund) in excess of the Fund's basis in the MLP will generally be taxable to the Fund as capital gain. The Funds will not benefit from favorable federal income tax rates on long-term capital gains because they will be treated as corporations for federal income tax purposes.

Depreciation or other cost recovery deductions passed through to a Fund from investments in MLPs in a given year will generally reduce the Fund's taxable income (and earnings and profits), but those deductions may be recaptured in the Fund's income (and earnings and profits) in subsequent years when the MLPs dispose of their assets or when the Fund disposes of its interests in the MLPs. When deductions are recaptured, the Fund may owe a tax (the payment of which will reduce the Fund's net assets) and distributions to the Fund's shareholders may be taxable, even though the shareholders at the time of the recapture might not have held Shares in the Fund at the time the deductions were taken by the Fund, and even though the Fund does not have corresponding economic gain on its investment at the time of the recapture.

The tax treatment of all items allocated to a Fund each year by MLPs will not be known until the Fund receives a schedule K-1 for that year with respect to each of its MLP investments. A Fund's tax liability will not be known until the Fund completes its annual tax return. A Fund's tax estimates could vary substantially from the actual liability and therefore the determination of a Fund's actual tax liability may have a material adverse effect on the value of an investment in a Fund. The payment of corporate income taxes imposed on a Fund will decrease cash available for distribution to shareholders.

Energy Sector Risks. Many MLPs operate within the energy sector. Therefore, a substantial portion of the MLPs in which a Fund invests are engaged in the energy sector of the economy. To the extent an Index includes securities of issuers in the energy sector; a Fund will invest in

companies in such sector. As such, a Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the energy sector. At times, the performance of companies in the energy sector may lag the performance of other sectors or the broader market as a whole. In addition, there are several specific risks associated with investments in the energy sector, including, but not limited to, the following:

- Regulatory Risk. The energy sector is highly regulated. MLPs operating in the energy sector are subject to significant regulation of nearly every aspect of their operations by federal, state and local governmental agencies. Such regulation can change rapidly or over time in both scope and intensity. For example, a particular by-product or process, including hydraulic fracturing, may be declared hazardous—sometimes retroactively—by a regulatory agency and unexpectedly increase production costs. Various governmental authorities have the power to enforce compliance with these regulations and the permits issued under them, and violators are subject to administrative, civil and criminal penalties, including civil fines, injunctions or both. Stricter laws, regulations or enforcement policies could be enacted in the future which would likely increase compliance costs and may materially adversely affect the financial performance of MLPs operating in the energy sector. There is an inherent risk that MLPs may incur material environmental costs and liabilities due to the nature of their businesses and the substances they handle, including substantial liabilities for environmental cleanup and restoration costs, claims made by neighboring landowners and other third parties for personal injury and property damage, and fines or penalties for related violations of environmental laws or regulations.
- Commodity Price Risk. MLPs operating in the energy sector may be affected by fluctuations in the prices of energy commodities, including, for example, natural gas, natural gas liquids, crude oil and coal, in the short- and long-term. Fluctuations in energy commodity prices would impact directly companies that own such energy commodities and could impact indirectly companies that engage in transportation, storage, processing, distribution or marketing of such energy commodities. Fluctuations in energy commodity prices can result from changes in general economic conditions or political circumstances (especially of key energy producing and consuming countries); market conditions; weather patterns; domestic production levels; volume of imports; energy conservation; domestic and foreign governmental regulation; international politics; policies of OPEC; taxation; tariffs; and the availability and costs of local, intrastate and interstate transportation methods. The energy sector as a whole may also be impacted by the perception that the performance of energy sector companies is directly linked to commodity prices. High commodity prices may drive further energy conservation efforts, and a slowing economy may adversely impact energy consumption, which may adversely affect the performance of MLPs and other companies operating in the energy sector. Recent economic and market events have fueled concerns regarding potential liquidations of commodity futures and options positions.
- Depletion Risk. MLPs engaged in the exploration, development, management or production of energy commodities face the risk that commodity reserves are depleted over time, with the potential associated effect of causing the market value of the MLP to decline over time. Such companies seek to increase their reserves through expansion of

their current businesses, acquisitions, further development of their existing sources of energy commodities, exploration of new sources of energy commodities or by entering into long-term contracts for additional reserves; however, there are risks associated with each of these potential strategies. If such companies fail to acquire additional reserves in a cost-effective manner and at a rate at least equal to the rate at which their existing reserves decline, their financial performance may suffer. Additionally, failure to replenish reserves could reduce the amount and affect the tax characterization of the distributions paid by such companies.

- Supply and Demand Risk. MLPs operating in the energy sector could be adversely affected by reductions in the supply of or demand for energy commodities. The volume of production of energy commodities and the volume of energy commodities available for transportation, storage, processing or distribution could be affected by a variety of factors, including depletion of resources; depressed commodity prices; catastrophic events; labor relations; increased environmental or other governmental regulation; equipment malfunctions and maintenance difficulties; import volumes; international politics, policies of OPEC; and increased competition from alternative energy sources. Alternatively, a decline in demand for energy commodities could result from factors such as adverse economic conditions (especially in key energy-consuming countries); increased taxation; increased environmental or other governmental regulation; increased fuel economy; increased energy conservation or use of alternative energy sources; legislation intended to promote the use of alternative energy sources; or increased commodity prices.
- Weather Risks. Weather conditions and the seasonality of weather patterns play a role in the cash flows of certain MLPs operating in the energy sector. MLPs in the propane industry; for example, rely on the winter heating season to generate almost all of their cash flow. In an unusually warm winter season, propane MLPs experience decreased demand for their product. Although most MLPs can reasonably predict seasonal weather demand based on normal weather patterns, extreme weather conditions, such as the hurricanes that severely damaged cities along the U.S. Gulf Coast in recent years, demonstrate that no amount of preparation can protect an MLP from the unpredictability of the weather. The damage done by extreme weather also may serve to increase insurance premiums for energy assets owned by MLPs, could significantly increase the volatility in the supply of energy-related commodities and could adversely affect such companies' financial condition and ability to pay distributions to shareholders.
- Acquisition Risk. The abilities of MLPs operating in the energy sector to grow and to increase cash distributions to unitholders can be highly dependent on their ability to make acquisitions that result in an increase in cash flows. In the event that MLPs are unable to make such accretive acquisitions because they are unable to identify attractive acquisition candidates and negotiate acceptable purchase contracts, because they are unable to raise financing for such acquisitions on economically acceptable terms, or because they are outbid by competitors, their future growth and ability to raise distributions will be limited. Furthermore, even if MLPs do consummate acquisitions that they believe will be accretive, the acquisitions may instead result in a decrease in cash flow. Any acquisition involves risks, including, among other things: mistaken assumptions about revenues and

costs, including synergies; the assumption of unknown liabilities; limitations on rights to indemnity from the seller; the diversion of management's attention from other business concerns; unforeseen difficulties operating in new product or geographic areas; and customer or key employee losses at the acquired businesses.

- **Interest Rate Risk.** Rising interest rates could adversely impact the financial performance and/or the present value of cash flow of MLPs operating in the energy sector by increasing their costs of capital. This may reduce their ability to execute acquisitions or expansion projects in a cost-effective manner. MLP valuations are based on numerous factors, including sector and business fundamentals, management expertise, and expectations of future operating results. However, MLP yields are also susceptible in the short-term to fluctuations in interest rates and the prices of MLP securities may decline when interest rates rise.
- **Catastrophic Event Risk.** MLPs operating in the energy sector are subject to many dangers inherent in the production, exploration, management, transportation, processing and distribution of natural gas, natural gas liquids, crude oil, refined petroleum products and other hydrocarbons. These dangers include leaks, fires, explosions, damage to facilities and equipment resulting from natural disasters, inadvertent damage to facilities and equipment (such as those suffered by BP's Deepwater Horizon drilling platform in 2010) and terrorist acts. Since the September 11th terrorist attacks, the U.S. government has issued warnings that energy assets, specifically U.S. pipeline infrastructure, may be targeted in future terrorist attacks. These dangers give rise to risks of substantial losses as a result of loss or destruction of reserves; damage to or destruction of property, facilities and equipment; pollution and environmental damage; and personal injury or loss of life. Any occurrence of such catastrophic events could bring about a limitation, suspension or discontinuation of the operations of certain assets owned by such MLP. MLPs operating in the energy sector may not be fully insured against all risks inherent in their business operations and, therefore, accidents and catastrophic events could adversely affect such companies' financial condition and ability to pay distributions to shareholders. We expect that increased governmental regulation to mitigate such catastrophic risk such as the recent oil spills referred to above, could increase insurance premiums and other operating costs for MLPs.

Industry Specific Risks. MLPs can be negatively impacted by market perception that MLPs' performance and distributions are directly tied to commodity prices. Furthermore, a significant decrease in the production of natural gas, oil or other energy commodities, due to a decline in production from existing facilities, import supply disruption or otherwise, would reduce revenue and operating income of MLPs and, therefore, the ability of MLPs to make distributions to partners. Changes in demand for transportation of commodities over longer distances and supply of vessels to carry those commodities may materially affect revenues, profitability and cash flows.

Energy Sector. MLPs operating in the energy sector are also subject to risks that are specific to the industry they serve.

- Midstream. MLPs that operate midstream assets are subject to supply and demand fluctuations in the markets they serve which may be impacted by a wide range of factors including fluctuating commodity prices, weather, increased conservation or use of alternative fuel sources, increased governmental or environmental regulation, depletion, rising interest rates, declines in domestic or foreign production, accidents or catastrophic events, increasing operating expenses and economic conditions, among others. Further, MLPs that operate gathering and processing assets are subject to natural declines in the production of the oil and gas fields they serve. In addition, some gathering and processing contracts subject the owner of such assets to direct commodity price risk.
- Exploration and production. Exploration and production MLPs are particularly vulnerable to declines in the demand for and prices of crude oil and natural gas. Reductions in prices for crude oil and natural gas can cause a given reservoir to become uneconomic for continued production earlier than it would if prices were higher, resulting in the plugging and abandonment of, and cessation of production from, that reservoir. In addition, lower commodity prices not only reduce revenues but also can result in substantial downward adjustments in reserve estimates. The accuracy of any reserve estimate is a function of the quality of available data, the accuracy of assumptions regarding future commodity prices and future exploration and development costs and engineering and geological interpretations and judgments. Different reserve engineers may make different estimates of reserve quantities and related revenue based on the same data. Actual oil and gas prices, development expenditures and operating expenses will vary from those assumed in reserve estimates, and these variances may be significant. Any significant variance from the assumptions used could result in the actual quantity of reserves and future net cash flow being materially different from those estimated in reserve reports. In addition, results of drilling, testing and production and changes in prices after the date of reserve estimates may result in downward revisions to such estimates. Substantial downward adjustments in reserve estimates could have a material adverse effect on a given exploration and production company's financial position and results of operations. In addition, due to natural declines in reserves and production, exploration and production companies must economically find or acquire and develop additional reserves in order to maintain and grow their revenues and distributions. Exploration and production MLPs seek to reduce cash flow volatility associated with commodity prices by executing multi-year hedging strategies that fix the price of gas and oil produced. There can be no assurance that the hedging strategies currently employed by these MLPs are currently effective or will remain effective.
- Marine shipping. Marine shipping MLPs are primarily marine transporters of natural gas, crude oil or refined petroleum products. Marine shipping companies are exposed to many of the same risks as other energy companies. In addition, the highly cyclical nature of the marine transportation industry may lead to volatile changes in charter rates and vessel values, which may adversely affect the revenues, profitability and cash flows of such companies. Fluctuations in charter rates result from changes in the supply and demand for vessel capacity and changes in the supply and demand for certain energy commodities. Changes in demand for transportation of commodities over longer distances and supply of vessels to carry those commodities may materially affect revenues, profitability and cash flows. The value of marine transportation vessels may fluctuate and could adversely affect the value of shipping company securities in a Fund's

portfolio. Declining marine transportation values could affect the ability of shipping companies to raise cash by limiting their ability to refinance their vessels, thereby adversely impacting such company's liquidity. Shipping company vessels are at risk of damage or loss because of events such as mechanical failure, collision, human error, war, terrorism, piracy, cargo loss and bad weather. In addition, changing economic, regulatory and political conditions in some countries, including political and military conflicts, have from time to time resulted in attacks on vessels, mining of waterways, piracy, terrorism, labor strikes, boycotts and government requisitioning of vessels. These sorts of events could interfere with shipping lanes and result in market disruptions and a significant reduction in cash flow for the shipping companies.

- **Propane.** Propane MLPs are distributors of propane to homeowners for space and water heating. MLPs with propane assets are subject to earnings variability based upon weather conditions in the markets they serve, fluctuating commodity prices, customer conservation and increased use of alternative fuels, increased governmental or environmental regulation, and accidents or catastrophic events, among others.
- **Natural Resource.** MLPs with coal, timber, fertilizer and other mineral assets are subject to supply and demand fluctuations in the markets they serve, which will be impacted by a wide range of domestic and foreign factors including fluctuating commodity prices, the level of their customers' coal stockpiles, weather, increased conservation or use of alternative fuel sources, increased governmental or environmental regulation, depletion, declines in production, mining accidents or catastrophic events, health claims and economic conditions, among others. In light of increased state and federal regulation, it has been increasingly difficult to obtain and maintain the permits necessary to mine coal. Further, such permits, if obtained, have increasingly contained more stringent, and more difficult and costly to comply with, provisions relating to environmental protection.

Energy Infrastructure Sector. Energy infrastructure MLPs are also subject to risks that are specific to the industry they serve.

- **Midstream.** Midstream MLPs that provide crude oil, refined product and natural gas services are subject to supply and demand fluctuations in the markets they serve which may be impacted by a wide range of factors including fluctuating commodity prices, weather, increased conservation or use of alternative fuel sources, increased governmental or environmental regulation, depletion, rising interest rates, declines in domestic or foreign production, accidents or catastrophic events, increasing operating expenses and economic conditions, among others.
- **Pipeline.** Pipeline MLPs are not subject to direct commodity price exposure because they do not own the underlying energy commodity. However, the MLP sector can be hurt by market perception that MLPs' performance and distributions are directly tied to commodity prices. Also, a significant decrease in the production of natural gas, oil, or other energy commodities, due to a decline in production from existing facilities, import supply disruption, or otherwise, would reduce revenue and operating income of MLPs and, therefore, the ability of MLPs to make distributions to partners.

A sustained decline in demand for crude oil, natural gas and refined petroleum products could adversely affect MLP revenues and cash flows. Factors that could lead to a decrease in market demand include a recession or other adverse economic conditions, an increase in the market price of the underlying commodity, higher taxes or other regulatory actions that increase costs, or a shift in consumer demand for such products. Demand may also be adversely impacted by consumer sentiment with respect to global warming and/ or by any state or federal legislation intended to promote the use of alternative energy sources, such as bio-fuels.

MLPs employ a variety of means of increasing cash flow, including increasing utilization of existing facilities, expanding operations through new construction, expanding operations through acquisitions, or securing additional long-term contracts. Thus, some MLPs may be subject to construction risk, acquisition risk or other risk factors arising from their specific business strategies. A significant slowdown in large energy companies' disposition of energy infrastructure assets and other merger and acquisition activity in the energy MLP industry could reduce the growth rate of cash flows received by a Fund from MLPs that grow through acquisitions.

Deferred Tax Asset Risk. To the extent a Fund accrues a net deferred tax asset, consideration will be given as to whether or not a valuation allowance is required. The need to establish a valuation allowance for deferred tax assets will be assessed periodically by a Fund based on the criterion established by the Financial Accounting Standards Board Codification Topic 740, Income Taxes (formerly Statement of Financial Accounting Standards No. 109) ("ASC Topic 740") that it is more likely than not that some portion or all of the deferred tax asset will not be realized. In the assessment for a valuation allowance, consideration will be given to all positive and negative evidence related to the realization of the deferred tax asset. This assessment will consider, among other matters, the nature, frequency and severity of current and cumulative losses, forecasts of future profitability (which are highly dependent on future MLP cash distributions), the duration of statutory carryforward periods and the associated risk that operating loss carryforwards may expire unused. If a valuation allowance is required to reduce the deferred tax asset in the future, it could have a material impact on a Fund's NAV and results of operations in the period it is recorded. To the extent a Fund accrues a net deferred tax asset in the future, such deferred tax assets may constitute a relatively high percentage of a Fund's NAV. Any valuation allowance required against such deferred tax assets or future adjustments to a valuation allowance may reduce a Fund's deferred tax assets and could have a material impact on a Fund's NAV and results of operations in the period the valuation allowance is recorded or adjusted.

Non-Diversification Risk. Each Fund is a non-diversified investment company under the Investment Company Act of 1940, as amended (the "1940 Act") and will not elect to be treated as a regulated investment company under the Code. As a result, there are no regulatory requirements under the 1940 Act or the Code that limit the proportion of a Fund's assets that may be invested in securities of a single issuer. Accordingly, a Fund may invest a greater portion of its assets in a more limited number of issuers than a diversified fund. A Fund will select its investments from the small pool of energy infrastructure MLPs consistent with its investment objective and policies. An investment in a Fund may present greater risk to an investor than an

investment in a diversified portfolio because changes in the financial condition or market assessment of a single issuer may cause greater fluctuations in the value of a Fund's Shares.

Passive Investment Risk. The Funds are not actively managed. Therefore, unless a specific security is removed from an Index or the selling of shares of that security is otherwise required upon a rebalancing of an Index as addressed in the Index methodology, a Fund generally would not sell a security because the security's issuer was in financial trouble. If a specific security is removed from an Index, a Fund may be forced to sell such security at an inopportune time or for a price other than the security's current market value. An investment in a Fund involves risks similar to those of investing in any equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. It is anticipated that the value of Fund Shares will decline, more or less, in correspondence with any decline in value of an Index. The Indexes may not contain the appropriate mix of securities for any particular point in the business cycle of the overall economy, particular economic sectors, or narrow industries within which the commercial activities of the companies comprising the portfolio securities holdings of a Fund are conducted, and the timing of movements from one type of security to another in seeking to replicate an Index could have a negative effect on a Fund. Unlike with an actively managed fund, the Adviser does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, a Fund's performance could be lower than other types of mutual funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline.

Tracking Error Risk. Tracking error refers to the risk that the Adviser may not be able to cause a Fund's performance to match or correlate to that of its Index, either on a daily or aggregate basis. There are a number of factors that may contribute to a Fund's tracking error, such as Fund expenses, imperfect correlation between a Fund's investments and those of its Index, rounding of share prices, the timing or magnitude of changes to the composition of its Index, regulatory policies, and high portfolio turnover rate. The Funds incur a number of operating expenses not applicable to the Indexes and incurs costs associated with buying and selling securities, especially when rebalancing a Fund's securities holdings to reflect changes in the composition of its Index and raising cash to meet redemptions or deploying cash in connection with newly created Creation Units. In addition, mathematical compounding may prevent a Fund from correlating with the monthly, quarterly, annual or other period performance of its benchmark. Tracking error may cause a Fund's performance to be less than expected. As discussed above, the Funds will be subject to taxation on their taxable income. The NAV of Fund Shares will also be reduced by the accrual of any deferred tax liabilities. The Indexes however are calculated without any deductions for taxes except to the extent of withholding taxes on distributions of foreign securities as addressed in the Index methodology. As a result, a Fund's after tax performance could differ significantly from its Index even if the pretax performance of a Fund and the performance of its Index are closely correlated.

Additional Investment Strategies

The Funds, using an “indexing” investment approach, seek to provide investment results that, before fees and expenses, correspond generally to the price and yield performance of its Index. A number of factors may affect a Fund’s ability to achieve a high correlation with its Index, including the degree to which a Fund utilizes a sampling methodology. There can be no guarantee that a Fund will achieve a high degree of correlation.

Upon the recommendation of the Investment Sub-Adviser, the Trading Sub-Adviser may sell securities that are represented in an Index or purchase securities not yet represented in an Index, in anticipation of their removal from or addition to an Index. There may also be instances in which the Investment Sub-Adviser may choose to overweight securities in an Index, thus causing the Trading Sub-Adviser to purchase or sell securities not in an Index which the Investment Sub-Adviser believes are appropriate to substitute for certain securities in a Fund’s Index or utilize various combinations of other available investment techniques in seeking to track its Index. The Funds will not take defensive positions.

Each Fund may invest up to 20% of its total assets in cash, cash equivalents, such as money market instruments, or other types of investments that are not included in the Fund’s underlying index, including in certain derivatives, to the extent that the Investment Sub-Adviser believes such investments should help the Fund’s overall portfolio track its underlying index.

Each Fund may change its investment objective and underlying index without shareholder approval.

Additional Risks

Trading Issues. Although Fund Shares are listed for trading on the NYSE Arca, there can be no assurance that an active trading market for such shares will develop or be maintained. Trading in Fund Shares may be halted due to market conditions or for reasons that, in the view of the NYSE Arca, make trading in shares inadvisable. In addition, trading in Shares is subject to trading halts caused by extraordinary market volatility pursuant to NYSE Arca “circuit breaker” rules. There can be no assurance that the requirements of the NYSE Arca necessary to maintain the listing of a Fund will continue to be met or will remain unchanged or that the shares will trade with any volume, or at all.

Fluctuation of NAV. The NAV of Fund Shares will generally fluctuate with changes in the market value of a Fund’s securities holdings. The market prices of Shares will generally fluctuate in accordance with changes in a Fund’s NAV and supply and demand of Shares on the NYSE Arca. It cannot be predicted whether Fund Shares will trade below, at or above their NAV. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for Shares will be closely related to, but not identical to, the same forces influencing the prices of the securities of an Index trading individually or in the aggregate at any point in time. The market prices of Fund Shares may deviate significantly from the NAV of the shares during periods of market volatility. While the creation/redemption feature is designed to make it likely that Fund Shares normally will trade close to a Fund’s NAV,

disruptions to creations and redemptions may result in trading prices that differ significantly from such Fund's NAV. If an investor purchases Fund Shares at a time when the market price is at a premium to the NAV of the Shares or sells at a time when the market price is at a discount to the NAV of the Shares, then the investor may sustain losses.

Costs of Buying or Selling Shares. Investors buying or selling Fund Shares in the secondary market will pay brokerage commissions or other charges imposed by brokers as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Shares. In addition, secondary market investors will also incur the cost of the difference between the price that an investor is willing to pay for Shares (the "bid" price) and the price at which an investor is willing to sell Shares (the "ask" price). This difference in bid and ask prices is often referred to as the "spread" or "bid/ask spread." The bid/ask spread varies over time for Shares based on trading volume and market liquidity, and is generally lower if a Fund's Shares have more trading volume and market liquidity and higher if a Fund's Shares have little trading volume and market liquidity. Further, increased market volatility may cause increased bid/ask spreads. Due to the costs of buying or selling Shares, including bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Information Regarding the Indexes

Solactive High Income MLP Index

The Solactive High Income MLP Index is a rules-based index designed to provide investors a means of tracking the performance of selected MLPs which are publicly traded on a U.S. securities exchange. The Index is comprised of MLPs that meet certain criteria relating to current yield, coverage ratio and distribution growth as determined by Structured Solutions. Market capitalization and liquidity screens will be applied in addition to fundamental screens for current yield, coverage ratio and distribution growth to ensure sufficient market size and liquidity of the Index components.

To be eligible for inclusion in the Index, a company must be structured as an MLP and be classified as a "High Income" MLP. High Income MLPs include all MLPs operating with one of the following as a substantial business segment: exploration and production of oil and/or natural gas; sale, distribution and retail and wholesale marketing of propane, natural gas liquids, gasoline and other fuels; marine transportation of one or more of the following: crude oil, dry bulk, refined products, liquefied natural gas ("LNG"), and other commodities; direct mining, production and marketing of natural resources, including timber, fertilizers, coal and other minerals; energy services to the oil and gas industry; oil refining; leasing of mineral reserves; and operating as the general partner of any business listed above. As of February 28, 2013 the Index was concentrated in the energy sector and the Index included 25 MLPs.

Constituent securities of the Index must have a market capitalization of at least \$400 million on a rebalancing date to be eligible for inclusion in the Index. Securities with market capitalizations that fall below \$400 million between rebalancings will not be removed from the Index, but will

be evaluated for eligibility upon rebalancing. Securities with market capitalizations that fall below \$400 million upon the rebalancing of the Index will no longer be eligible for inclusion in the Index. As of February 28, 2013, the average market capitalization of companies included in the Index was \$2.1 billion. Rebalancing occurs annually, but index adjustments may occur more frequently under extraordinary circumstances including a company's merger, takeover bid, delisting, nationalization, insolvency, or suspension of its distributions. Securities must have a three-month average daily trading volume value of at least \$1 million to be eligible for the Index. An MLP must have a Minimum Quarterly Distribution policy in place, meaning that it intends to pay a minimum distribution to its common and subordinated unit holders upon initial public offering (assuming the MLP is able to generate sufficient cash flow from its operations after the payment of fees and expenses and other expenditures). Additionally, the MLP must have paid at least one distribution to shareholders to be eligible for inclusion in the Index. Only securities whose shares trade on a recognized U.S. securities exchange will be eligible for inclusion in the Index.

Solactive High Income Infrastructure MLP Index

The Solactive High Income Infrastructure MLP Index is a rules-based index designed to provide investors a means of tracking the performance of selected MLPs which are publicly traded on a U.S. securities exchange. The Index is comprised of MLPs that meet certain criteria relating to current yield, coverage ratio and distribution growth as determined by Structured Solutions. Market capitalization and liquidity screens will be applied in addition to fundamental screens for current yield, coverage ratio and distribution growth to ensure sufficient market size and liquidity of the Index components.

To be eligible for inclusion in the Index, a company must be structured as an MLP and be classified as an "Infrastructure" MLP. Infrastructure MLPs earn a majority of their cash flow from the transportation and storage of energy commodities and include all MLPs operating with one of the following as a substantial business segment: transportation, terminaling and storage of refined petroleum products, including gasoline, diesel, jet fuel, kerosene and heating oil; gathering, compressing, dehydrating, treating, processing, and marketing of natural gas, and fractionation of natural gas liquids; transportation and/or storage of natural gas and natural gas liquids; transportation of crude oil and/or refined petroleum products and other liquids; and operating as the general partner of an MLP which primarily engages in any of the aforementioned businesses. As of February 28, 2013, the Index was concentrated in the energy infrastructure sector and included 25 MLPs.

Constituent securities of the Index must have a market capitalization of at least \$1 billion on a selection date to be eligible for inclusion in the Index. Securities with market capitalizations that fall below \$1 billion between rebalancings will not be removed from the Index, but will be evaluated for eligibility upon rebalancing. Securities with market capitalizations that fall below \$1 billion upon the rebalancing of the Index will no longer be eligible for inclusion in the Index. As of February 28, 2013, the average market capitalization of companies included in the Index was \$9.9 billion. Rebalancing occurs annually, but index adjustments may occur more frequently under extraordinary circumstances including a company's merger, takeover bid, delisting, nationalization, insolvency, or suspension of its distributions. Securities must have a

most recent three-month average daily trading volume of at least \$4 million to be eligible for the Index. An MLP must have at least one distribution paid out to shareholders to be eligible for inclusion in the Index. Only securities whose shares trade on a recognized U.S. securities exchange will be eligible for inclusion in the Index.

Each Index was created and is maintained by Structured Solutions. Structured Solutions is a leading company in the structuring and indexing business for institutional clients. Solactive is Structured Solutions' own index brand under which indices are launched to be used by issuers to develop and calculate indices. More information about each Index, including a list of constituents may be reviewed on Structured Solutions' website: www.structured-solutions.de.

Portfolio Holdings

A description of the Funds' policies and procedures with respect to the disclosure of the Funds' portfolio securities is available in the Funds' Statement of Additional Information ("SAI").

Fund Management

Adviser. Exchange Traded Concepts, LLC or the Adviser, an Oklahoma limited liability company, is located at 2545 South Kelly Avenue, Suite C, Edmond, Oklahoma 73013. The Adviser was formed in 2009 and provides investment advisory services to other exchange-traded funds. The Adviser serves as investment adviser to the Funds and provides investment advice to the Funds and oversees the day-to-day operations of the Funds, subject to the direction and control of the Trust's Board of Trustees (the "Board"). The Adviser, in consultation with sub-advisers, also arranges for transfer agency, custody, fund administration and accounting, and other non-distribution related services necessary for the Funds to operate. The Adviser administers the Funds' business affairs, provides office facilities and equipment and certain clerical, bookkeeping and administrative services, and provides its officers and employees to serve as officers or Trustees of the Trust.

For the services it provides to each Fund, each Fund pays the Adviser a fee, which is calculated daily and paid monthly, at an annual rate of 0.82% on the average daily net assets of each Fund, subject to a \$25,000 minimum fee. Under the investment advisory agreement, the Adviser has agreed to pay all expenses incurred by each Fund except for the advisory fee, interest, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, extraordinary expenses, and distribution fees and expenses paid by the Trust under any distribution plan adopted pursuant to Rule 12b-1 under the 1940 Act (the "Excluded Expenses").

Sub-Advisers. Yorkville ETF Advisors, LLC or the Investment Sub-Adviser, a Delaware limited liability company, is located at 950 Third Avenue, 23rd Floor, New York, New York 10022. The Investment Sub-Adviser provides investment advisory services to exchange-traded funds. Other than certain functions delegated to the Trading Sub-Adviser, as discussed further below, the Investment Sub-Adviser is responsible for the day-to-day management of the Funds. The

Investment Sub-Adviser also makes investment decisions for the Funds and continuously reviews, supervises and administers the investment program of the Funds, subject to the supervision of the Adviser and the Board. Under a sub-advisory agreement, the Adviser pays the Investment Sub-Adviser a fee, which is calculated daily and paid monthly at an annual rate of 0.62% on the average daily net assets of each Fund. The Investment Sub-Adviser has agreed to assume the Adviser's responsibility to pay, or cause to be paid, all expenses of each Fund, except Excluded Expenses, not paid by the Adviser, including any portion of the minimum fee payable by each Fund to the Adviser that exceeds 0.82% of the Funds' average daily net assets.

Index Management Solutions LLC or the Trading Sub-Adviser, is a wholly-owned subsidiary of VTL Associates, LLC and a Pennsylvania limited liability company, is located at One Commerce Square, 2005 Market Street, Suite 2020, Philadelphia, Pennsylvania 19103. The Trading Sub-Adviser provides investment advisory services to various other exchange-traded funds as well as separate accounts. The Trading Sub-Adviser is responsible for trading portfolio securities on behalf of the Funds, including selecting broker-dealers to execute purchase and sale transactions as instructed by the Investment Sub-Adviser or in connection with any rebalancing or reconstitution of the Indexes, subject to the supervision of the Adviser and the Board of Trustees. Under a sub-advisory agreement, the Adviser pays the Trading Sub-Adviser a fee, which is calculated daily and paid monthly, at an annual rate of 0.055% on the average daily net assets of each Fund, subject to a \$10,000 minimum fee.

For the Yorkville High Income MLP ETF and the Yorkville High Income Infrastructure MLP ETF, a discussion regarding the basis for the Board's approval of the Investment Advisory Agreement with the Adviser and the Investment Sub-Advisory Agreements with the Investment Sub-Adviser and the Trading Sub-Adviser is or will be available in each Fund's Semi-Annual Report for the period ended May 31, 2012 and May 31, 2013, respectively.

Portfolio Manager

Darren R. Schuringa, CFA, Portfolio Manager of Yorkville ETF Advisors, LLC (the "Portfolio Manager"), is primarily responsible for the day-to-day management of the Funds. The Portfolio Manager is responsible for various functions related to portfolio management, including, but not limited to, investing cash inflows, implementing investment strategy, researching and reviewing investment strategy, and overseeing members of his portfolio management team with more limited responsibilities.

Mr. Schuringa is also Founder and Chief Investment Officer of Yorkville Capital Management, LLC, which he has managed for the last five years. Yorkville Capital Management is a registered investment advisory firm serving both individual investors as well as institutional clients. Yorkville Capital Management invests in equities and fixed income securities. Darren was previously a Partner and Senior Portfolio Manager with Estabrook Capital Management where he managed over \$1 billion of fund, institutional and individual assets. At Estabrook, Mr. Schuringa was responsible for separately managed accounts; in addition, he served as co-manager of the Bank of NY Hamilton Large Cap Value fund (BCPVX) and of an institutional collective trust (a multi-cap value trust) from the date of each fund's inception to the time of his

departure. Mr. Schuringa graduated from the University of Western Ontario and received an MBA in finance from Rollins College.

The SAI provides additional information about the Portfolio Manager's compensation, other accounts managed, and ownership of Fund Shares.

Buying and Selling the Funds

Fund Shares are listed for secondary trading on the NYSE Arca. When you buy or sell the Funds' Shares on the secondary market, you will pay or receive the market price. You may incur customary brokerage commissions and charges and may pay some or all of the spread between the bid and the offered price in the secondary market on each leg of a round trip (purchase and sale) transaction. The Shares will trade on the NYSE Arca at prices that may differ to varying degrees from the daily NAV of the Shares. A "Business Day" with respect to the Funds is any day on which the NYSE Arca is open for business. The NYSE Arca is generally open Monday through Friday and is closed weekends and the following holidays: New Year's Day, Martin Luther King, Jr. Day, Presidents' Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day.

NAV per share for a Fund is computed by dividing the value of the net assets of a Fund (*i.e.* the value of its total assets less total liabilities) by its total number of Shares outstanding. Expenses and fees, including management and distribution fees, if any, are accrued daily and taken into account for purposes of determining NAV. NAV is determined each business day, normally as of the close of regular trading of the NYSE (ordinarily 4:00 p.m., Eastern time).

When determining NAV, the value of the Funds' portfolio securities is based on market prices of the securities, which generally means a valuation obtained from an exchange or other market (or based on a price quotation or other equivalent indication of the value supplied by an exchange or other market) or a valuation obtained from an independent pricing service. If a security's market price is not readily available or does not otherwise accurately reflect the fair value of the security, the security will be valued by another method that the Board believes will better reflect fair value in accordance with the Trust's valuation policies and procedures. Fair value pricing may be used in a variety of circumstances, including but not limited to, situations when the value of a security in a Fund's portfolio has been materially affected by events occurring after the close of the market on which the security is principally traded but prior to the close of the NYSE Arca (such as in the case of a corporate action or other news that may materially affect the price of a security) or trading in a security has been suspended or halted. Accordingly, the Funds' NAV may reflect certain portfolio securities' fair values rather than their market prices.

Fair value pricing involves subjective judgments and it is possible that a fair value determination for a security will materially differ from the value that could be realized upon the sale of the security. In addition, fair value pricing could result in a difference between the prices used to calculate a Fund's NAV and the prices used by a Fund's benchmark Index. This may result in a difference between a Fund's performance and the performance of a Fund's benchmark Index.

Frequent Purchases and Redemptions of Fund Shares

The Funds do not impose any restrictions on the frequency of purchases and redemptions; however, the Funds reserve the right to reject or limit purchases at any time as described in the SAI. When considering that no restriction or policy was necessary, the Board evaluated the risks posed by arbitrage and market timing activities, such as whether frequent purchases and redemptions would interfere with the efficient implementation of a Fund's investment strategy, or whether they would cause a Fund to experience increased transaction costs. The Board considered that, unlike traditional mutual funds, Shares are issued and redeemed only in large quantities of Shares known as Creation Units available only from a Fund directly to a few institutional investors ("Authorized Participants"), and that most trading in a Fund occurs on the Exchange at prevailing market prices and does not involve a Fund directly. Given this structure, the Board determined that it is unlikely that trading due to arbitrage opportunities or market timing by shareholders would result in negative impact to a Fund or its shareholders. In addition, frequent trading of Shares done by Authorized Participants and arbitrageurs is critical to ensuring that the market price remains at or close to NAV.

Other Considerations

Distribution and Service Plan. Each Fund has adopted a Distribution and Service Plan in accordance with Rule 12b-1 under the 1940 Act pursuant to which payments of up to 0.25% of a Fund's average daily net assets may be made for the sale and distribution of its Fund Shares. However, the Board of Trustees has determined that no payments pursuant to the Distribution and Service Plan will be made for during the twelve (12) months from the date of this Prospectus. Thereafter, 12b-1 fees may only be imposed after approval by the Board of Trustees. Any forgone 12b-1 fees during the next 12 months will not be recoverable during any subsequent period. Because these fees would be paid out of a Fund's assets on an on-going basis, if payments are made in the future, these fees will increase the cost of your investment and may cost you more than paying other types of sales charges.

Dividends, Distributions and Taxes

Fund Distributions

The Funds intend to make distributions to investors at least quarterly.

Dividend Reinvestment Service

Brokers may make available to their customers who own a Fund's shares the DTC book-entry dividend reinvestment service. If this service is available and used, dividend distributions of both income and capital gains will automatically be reinvested in additional whole shares of that Fund. Without this service, investors would receive their distributions in cash. In order to achieve the maximum total return on their investments, investors are encouraged to use the dividend reinvestment service. To determine whether the dividend reinvestment service is available and whether there is a commission or other charge for using this service, consult your

broker. Brokers may require a Fund's shareholders to adhere to specific procedures and timetables. If this service is available and used, dividend distributions of both income and realized gains will be automatically reinvested in additional whole shares of a Fund purchased in the secondary market.

Tax Information

The following is a summary of some important tax issues that affect the Funds and their shareholders. The summary is based on current tax laws, which may be changed by legislative, judicial or administrative action. You should not consider this summary to be a detailed explanation of the tax treatment of the Funds, or the tax consequences of an investment in the Funds. More information about taxes is located in the SAI. You are urged to consult your tax adviser regarding specific questions as to foreign, federal, state and local taxes.

Tax Status of a Fund

Each Fund is taxed as a regular corporation for federal income tax purposes and as such is obligated to pay federal and applicable state and foreign corporate taxes on its taxable income. This differs from most investment companies, which elect to be treated as "regulated investment companies" under the Code in order to avoid paying entity level income taxes. Under current law, the Funds are not eligible to elect treatment as a regulated investment company due to its investments primarily in MLPs invested in energy assets. As a result, the Funds will be obligated to pay federal and state taxes on its taxable income as opposed to most other investment companies which are not so obligated. The extent to which a Fund is required to pay U.S. federal, state or local corporate income, franchise, alternative minimum or other corporate taxes could materially reduce the Fund's cash available to make distributions on the Shares.

As discussed below, each Fund expects that a portion of the distribution it receives from MLPs may be treated as a tax-deferred return of capital. The amount of taxes currently paid by a Fund will vary depending on the amount of income, gains, losses, and deductions the Fund is allocated from its MLP investments and on the Fund's realized gains and losses. Such taxes will reduce your return from an investment in a Fund.

Each Fund invests its assets primarily in MLPs, which generally are treated as partnerships for federal income tax purposes. As a partner in MLPs, each Fund must report its allocable share of the MLPs' taxable income in computing the Fund's taxable income, regardless of the extent (if any) to which the MLPs make distributions. Based upon the Adviser's review of the historic results of the types of MLPs in which each Fund invests, the Adviser expects that the cash flow received by each Fund with respect to its MLP investments will generally exceed the net taxable income allocated to it. This excess cash flow will result primarily from tax deductions, such as depreciation, amortization and depletion, that will be allocated to each Fund from the MLPs. The excess cash flow generally will not be currently taxable to a Fund but, rather, will result in a reduction of the Fund's adjusted tax basis in the MLPs as described in the following paragraph. There is no assurance that the Adviser's expectation regarding the tax character of MLP distributions will be realized. If this expectation is not realized, there may be greater tax expense borne by the Funds and less cash available to distribute to you or to pay to expenses.

Each Fund will also be subject to U.S. federal income tax at the regular graduated corporate tax rates on any gain recognized by the applicable Fund on any sale of equity securities of an MLP. Cash distributions from an MLP to a Fund that exceed such Fund's allocable share of such MLP's net taxable income will reduce a Fund's adjusted tax basis in the equity securities of the MLP. These reductions in such Fund's adjusted tax basis in the MLP equity securities will increase the amount of any taxable gain (or decrease the amount of any tax loss) recognized by a Fund on a subsequent sale of the securities.

The Funds will accrue deferred income taxes for any future tax liability associated with (i) that portion of MLP distributions considered to be a tax-deferred return of capital as well as (ii) capital appreciation of its investments. The Funds' accrued deferred tax liability will be reflected each day in the Funds' NAV. Increases in deferred tax liability will decrease NAV. Conversely, decreases in deferred tax liability will increase NAV. The Funds generally compute deferred income taxes based on the federal tax rate applicable to corporations, currently 35%, and an assumed rate attributable to state taxes.

Tax Status of Distributions

Distributions made to you by a Fund (other than distributions in redemption of shares subject to Section 302(b) of the Code) will generally constitute dividends to the extent of your allocable share of the Fund's current or accumulated earnings and profits, as calculated for federal income tax purposes. Generally, a corporation's earnings and profits are computed based upon net taxable income, with certain specified adjustments. As explained above, based upon the historic performance of the types of MLPs in which the Funds intend to invest, the Adviser anticipates that the distributed cash from the MLPs generally will exceed the Fund's shares of the MLPs' net taxable income. Because each Fund's earnings and profits will be based on its allocable share of net taxable income from MLPs (and not on distributions received from MLPs), the Adviser anticipates that only a portion of a Fund's distributions will be treated as dividend income to you. To the extent that distributions to you exceed your allocable share of a Fund's current and accumulated earnings and profits, your tax basis in the Fund's Shares with respect to which the distribution is made will be reduced, which will increase the amount of any taxable gain (or decrease the amount of any tax loss) realized upon a subsequent sale or redemption of such Shares. To the extent you hold such Shares as a capital asset and have no further basis in the Shares to offset the distribution, you will report the excess as capital gain.

Distributions treated as dividends under the foregoing rules generally will be taxable as ordinary income to you but may be treated as "qualified dividend income." Qualified dividend income received by individuals and other noncorporate shareholders is taxed at long-term capital gain rates. For a dividend to constitute qualified dividend income, the shareholder generally must hold the shares paying the dividend for more than 60 days during the 121-day period beginning 60 days before the ex-dividend date, although a longer period may apply if the shareholder engages in certain risk reduction transactions with respect to the common stock.

Dividends paid by the Funds are expected to be eligible for the dividends-received deduction available to corporate shareholders under Section 243 of the Code. However, corporate

shareholders should be aware that certain limitations apply to the availability of the dividends received deduction, including rules which limit the deduction in cases where (i) certain holding period requirements are not met, (ii) the corporate shareholder is obligated (e.g., pursuant to a short sale) to make related payments with respect to positions in substantially similar or related property, or (iii) the corporate shareholder's investment in shares of a particular Fund is financed with indebtedness. Corporate shareholders should consult their own tax advisors regarding the application of these limitations to their particular situations.

Tax Status of Share Transactions. Each sale or exchange of Fund Shares will generally be a taxable event to you. Any capital gain or loss realized upon a sale of Fund Shares is generally treated as a long-term gain or loss if the shares have been held for more than one year.

Medicare Contribution Tax. A Medicare contribution tax is imposed at the rate of 3.8% on net investment income, including dividends, interest, and capital gain, of U.S. individuals with income exceeding specified thresholds, and on undistributed net investment income of certain estates and trusts.

Non-U.S. Investors. If you are not a citizen or permanent resident of the United States, certain of a Fund's dividends will generally be subject to a 30% U.S. withholding tax, unless a lower treaty rate applies or unless such income is effectively connected with a U.S. trade or business. Gains from the sale or other disposition of shares of the Funds generally are not subject to U.S. taxation, unless the recipient is an individual who either (1) meets the Code's definition of "resident alien" or (2) is physically present in the U.S. for 183 days or more per year. Different tax consequences may result if the foreign shareholder is engaged in a trade or business within the United States. Tax consequences to a foreign shareholder entitled to claim the benefits of a tax treaty may be different than those described above.

The foregoing discussion summarizes some of the consequences under current federal tax law of an investment in a Fund. It is not a substitute for personal tax advice. Consult your personal tax advisor about the potential tax consequences of an investment in a Fund under all applicable tax laws.

Additional Information

Other Information

For purposes of the 1940 Act, the Funds are treated as a registered investment company. Section 12(d)(1) of the 1940 Act restricts investments by investment companies in the securities of other investment companies, including Shares of the Funds. The SEC has issued an exemptive order to the Trust permitting registered investment companies to invest in exchange-traded funds offered by the Trust beyond the limits of Section 12(d)(1) subject to certain terms and conditions, including that such registered investment companies enter into an agreement with the Trust.

Continuous Offering

The method by which Creation Units are purchased and traded may raise certain issues under applicable securities laws. Because new Creation Units are issued and sold by the Funds on an ongoing basis, at any point a “distribution,” as such term is used in the Securities Act of 1933, as amended (the “Securities Act”), may occur. Broker-dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner which could render them statutory underwriters and subject them to the Prospectus delivery and liability provisions of the Securities Act.

For example, a broker-dealer firm or its client may be deemed a statutory underwriter if it takes Creation Units after placing an order with the Distributor, breaks them down into individual Shares, and sells such Shares directly to customers, or if it chooses to couple the creation of a supply of new Shares with an active selling effort involving solicitation of secondary market demand for Shares. A determination of whether one is an underwriter for purposes of the Securities Act must take into account all the facts and circumstances pertaining to the activities of the broker-dealer or its client in the particular case, and the examples mentioned above should not be considered a complete description of all the activities that could lead to categorization as an underwriter.

Broker-dealer firms should also note that dealers who are not “underwriters” but are effecting transactions in Shares, whether or not participating in the distribution of Shares, are generally required to deliver a prospectus. This is because the prospectus delivery exemption in Section 4(3) of the Securities Act is not available with respect to such transactions as a result of Section 24(d) of the 1940 Act. As a result, broker-dealer-firms should note that dealers who are not underwriters but are participating in a distribution (as contrasted with ordinary secondary market transactions) and thus dealing with Shares that are part of an over-allotment within the meaning of Section 4(3)(a) of the Securities Act would be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the Securities Act. Firms that incur a prospectus delivery obligation with respect to Shares of a Fund are reminded that under Rule 153 of the Securities Act, a prospectus delivery obligation under Section 5(b)(2) of the Securities Act owed to an exchange member in connection with a sale on the NYSE Arca is satisfied by the fact that such Fund’s Prospectus is available at the NYSE Arca upon request. The prospectus delivery mechanism provided in Rule 153 is only available with respect to transactions on an exchange.

Premium/Discount Information

Information regarding how often the Shares of the Funds traded on the NYSE Arca at a price above (*i.e.*, at a premium) or below (*i.e.*, at a discount) the NAV of the Funds during the past four quarters, as applicable, can be found at www.yetfs.com.

Financial Highlights

The table that follows presents the financial highlights for the Yorkville High Income MLP ETF. The financial highlights table is intended to help you understand the Fund's financial performance since the Fund commenced operations. Certain information reflects financial results for a single Fund share. The total returns in the table represent the rate that an investor would have earned or lost, on an investment in the Fund (assuming reinvestment of all dividends and distributions). This information has been derived from the financial statements audited by Cohen Fund Audit Services, Ltd., an Independent Registered Public Accounting Firm, whose report, along with the Fund's financial statements, are included in the Fund's Annual Report, which is available upon request.
